

Gaggle Safety Management with Web Activity Monitoring

Gaggle's Web Activity Monitoring reviews student browser activities on school-provided accounts or devices, offering an additional proactive student safety measure that works 24/7.

This value added feature helps protect your students by:

- ✔ Flagging concerning student searches and generating alerts for Emergency Contacts.
- ✔ Actively monitoring and capturing concerning content entered into browsers, including forms, chats, emails, drafts, and unsent content.
- ✔ Sharing screen captures of concerning browser activity with Emergency Contacts.

Web Activity Monitoring is currently available on the Chrome and Edge browsers. A Safari browser extension will be released later in the spring.

Web Activity Monitoring is included with your Gaggle Safety Management license.
