

Gaggle Vault

Gaggle Vault is our sophisticated archiving and backup solution. It meets all compliance law requirements while providing customers with easy access to archived messages and content.

Search Capabilities

Gaggle Vault offers a myriad of search capabilities. Simple search provides the user with results related to date range, specific user, or keyword. Advanced search offers granular search functionality with detailed search parameters. The advanced search function includes a visual builder that displays the search criteria in clear language. Searches are built as query strings and can be edited as needed. Boolean operators may be used or displayed.

Export and Recovery Options

Archived content and messages are available for export from the Vault. Content and messages may be accessed through a search and exported in a variety of formats to support your needs. Message recovery is available through self-service methods. In instances of significant recovery needs, Gaggle's Support and Engineering teams will be available to assist.

Regulatory Compliance and Litigation Holds

Gaggle Vault provides districts with everything they need to ensure regulatory compliance. In instances where litigation holds are necessary, Gaggle Vault offers clear and easy-to-navigate functionality for compliance.

Differentiated Access

Users have role-based permissions. The varied permissions allow users to search and view content within the Vault, as appropriate. Users with lower level permissions will have the ability to search their own content while users with higher level permissions will be permitted to search content across groups and for all users.
